Security Assessment Report

Scan ID	12
Target	127.0.0.1
Status	COMPLETED
Started At	2026-08-29 08:25:04.534338
Completed At	2026-08-29 08:27:12.565969

Executive Risk Summary

Overall Risk	MEDIUM
Risk Score	5.0/10
Total Findings	7

Severity Distribution

Severity	Count
Critical	0
High	0
Medium	2
Low	0
Info	5

Security Findings

Finding 1

Ports	135
Service	msrpc
Product	Microsoft Windows RPC
Severity	INFO
CVE	N/A
CVSS Score	N/A
Description	Port discovered by Nmap
Remediation	N/A

Description: Port discovered by Nmap

Finding 2

Ports	445
Service	microsoft-ds
Product	N/A
Severity	INFO
CVE	N/A
CVSS Score	N/A
Description	Port discovered by Nmap
Remediation	N/A

Description: Port discovered by Nmap

Finding 3

Ports	902, 912
Service	vmware-auth
Product	VMware Authentication Daemon
Severity	MEDIUM
CVE	CVE-2009-3707
CVSS Score	5.0
Description	VMware Authentication Daemon 1.0 in vmware-authd.exe in the VMware Authorization Service in VMware Workstation 7.0
Remediation	N/A

Description: VMware Authentication Daemon 1.0 in vmware-authd.exe in the VMware Authorization Service in VMware Workstation 7.0 before 7.0.1 build 227600 and 6.5.x before 6.5.4 build 246459, VMware Player 3.0 before 3.0.1 build 227600 and 2.5.x before 2.5.4 build 246459, VMware ACE 2.6 before 2.6.1 build 227600 and 2.5.x before 2.5.4 build 246459, and VMware Server 2.x allows remote attackers to cause a denial of service (process crash) via a \x25\xFF sequence in the USER and PASS commands, related to a "format string DoS" issue. NOTE: some of these details are obtained from third party information.

Finding 4

Ports	902, 912
Service	vmware-auth
Product	VMware Authentication Daemon
Severity	MEDIUM
CVE	CVE-2009-4811
CVSS Score	5.0
Description	VMware Authentication Daemon 1.0 in vmware-authd.exe in the VMware Authorization Service in VMware Workstation 7.0
Remediation	N/A

Description: VMware Authentication Daemon 1.0 in vmware-authd.exe in the VMware Authorization Service in VMware Workstation 7.0 before 7.0.1 build 227600 and 6.5.x before 6.5.4 build 246459, VMware Player 3.0 before 3.0.1 build 227600 and 2.5.x before 2.5.4 build

246459, VMware ACE 2.6 before 2.6.1 build 227600 and 2.5.x before 2.5.4 build 246459, and VMware Server 2.x allows remote attackers to cause a denial of service (process crash) via a \x25\x90 sequence in the USER and PASS commands, a related issue to CVE-2009-3707. NOTE: some of these details are obtained from third party information.

Finding 5

Ports	2869
Service	http
Product	Microsoft HTTPAPI httpd
Severity	INFO
CVE	N/A
CVSS Score	N/A
Description	Port discovered by Nmap
Remediation	N/A

Description: Port discovered by Nmap

Finding 6

Ports	8000
Service	http-alt
Product	uvicorn
Severity	INFO
CVE	N/A
CVSS Score	N/A
Description	Port discovered by Nmap
Remediation	N/A

Description: Port discovered by Nmap

Finding 7

Ports	9080
Service	glrpc
Product	N/A
Severity	INFO
CVE	N/A
CVSS Score	N/A
Description	Port discovered by Nmap
Remediation	N/A

Description: Port discovered by Nmap

Recommended Actions

Review medium-risk findings, exposed services, and available security updates.
