Security Assessment Report

Scan ID	15
Target	127.0.0.1
Status	COMPLETED
Started At	2026-08-31 16:33:37.843618
Completed At	2026-08-31 16:35:47.060959

Executive Risk Summary

Overall Risk	MEDIUM
Risk Score	5/10
Total Findings	9

Severity Distribution

Severity	Count
Critical	0
High	0
Medium	4
Low	0
Info	5

Security Findings

Finding 1

Port	135
Protocol	tcp
State	open
Service	msrpc
Product	Microsoft Windows RPC
Version	N/A
Severity	INFO
CVE	N/A

CVSS Score	N/A

Description: Port discovered by Nmap

Finding 2

Port	445
Protocol	tcp
State	open
Service	microsoft-ds
Product	N/A
Version	N/A
Severity	INFO
CVE	N/A
CVSS Score	N/A

Description: Port discovered by Nmap

Finding 3

Port	902
Protocol	tcp
State	open
Service	vmware-auth
Product	VMware Authentication Daemon
Version	1.10
Severity	MEDIUM
CVE	CVE-2009-3707
CVSS Score	5.0

Description: VMware Authentication Daemon 1.0 in vmware-authd.exe in the VMware Authorization Service in VMware Workstation 7.0 before 7.0.1 build 227600 and 6.5.x before 6.5.4 build 246459, VMware Player 3.0 before 3.0.1 build 227600 and 2.5.x before 2.5.4 build 246459, VMware ACE 2.6 before 2.6.1 build 227600 and 2.5.x before 2.5.4 build 246459, and VMware Server 2.x allows remote attackers to cause a denial of service (process crash) via a \x25\xFF sequence in the USER and PASS commands, related to a "format string DoS" issue. NOTE: some of these details are obtained from third party information.

Remediation: Review CVE-2009-3707 and apply the vendor security update or upgrade to a patched version.

Finding 4

Port	902
Protocol	tcp
State	open
Service	vmware-auth

Product	VMware Authentication Daemon
Version	1.10
Severity	MEDIUM
CVE	CVE-2009-4811
CVSS Score	5.0

Description: VMware Authentication Daemon 1.0 in vmware-authd.exe in the VMware Authorization Service in VMware Workstation 7.0 before 7.0.1 build 227600 and 6.5.x before 6.5.4 build 246459, VMware Player 3.0 before 3.0.1 build 227600 and 2.5.x before 2.5.4 build 246459, VMware ACE 2.6 before 2.6.1 build 227600 and 2.5.x before 2.5.4 build 246459, and VMware Server 2.x allows remote attackers to cause a denial of service (process crash) via a \x25\x90 sequence in the USER and PASS commands, a related issue to CVE-2009-3707. NOTE: some of these details are obtained from third party information.

Remediation: Review CVE-2009-4811 and apply the vendor security update or upgrade to a patched version.

Finding 5

Port	912
Protocol	tcp
State	open
Service	vmware-auth
Product	VMware Authentication Daemon
Version	1.0
Severity	MEDIUM
CVE	CVE-2009-3707
CVSS Score	5.0

Description: VMware Authentication Daemon 1.0 in vmware-authd.exe in the VMware Authorization Service in VMware Workstation 7.0 before 7.0.1 build 227600 and 6.5.x before 6.5.4 build 246459, VMware Player 3.0 before 3.0.1 build 227600 and 2.5.x before 2.5.4 build 246459, VMware ACE 2.6 before 2.6.1 build 227600 and 2.5.x before 2.5.4 build 246459, and VMware Server 2.x allows remote attackers to cause a denial of service (process crash) via a \x25\xFF sequence in the USER and PASS commands, related to a "format string DoS" issue. NOTE: some of these details are obtained from third party information.

Remediation: Review CVE-2009-3707 and apply the vendor security update or upgrade to a patched version.

Finding 6

Port	912
Protocol	tcp
State	open
Service	vmware-auth
Product	VMware Authentication Daemon
Version	1.0
Severity	MEDIUM
CVE	CVE-2009-4811
CVSS Score	5.0

Description: VMware Authentication Daemon 1.0 in vmware-authd.exe in the VMware Authorization Service in VMware Workstation 7.0 before 7.0.1 build 227600 and 6.5.x before 6.5.4 build 246459, VMware Player 3.0 before 3.0.1 build 227600 and 2.5.x before 2.5.4 build 246459, VMware ACE 2.6 before 2.6.1 build 227600 and 2.5.x before 2.5.4 build 246459, and VMware Server 2.x allows remote attackers to cause a denial of service (process crash) via a \x25\x90 sequence in the USER and PASS commands, a related issue to CVE-2009-3707. NOTE: some of these details are obtained from third party information.

Remediation: Review CVE-2009-4811 and apply the vendor security update or upgrade to a patched version.

Finding 7

Port	2869
Protocol	tcp
State	open
Service	http
Product	Microsoft HTTPAPI httpd
Version	2.0
Severity	INFO
CVE	N/A
CVSS Score	N/A

Description: Port discovered by Nmap

Finding 8

Port	8000
Protocol	tcp
State	open
Service	http-alt
Product	uvicorn
Version	N/A
Severity	INFO
CVE	N/A
CVSS Score	N/A

Description: Port discovered by Nmap

Finding 9

Port	9080
Protocol	tcp
State	open
Service	glrpc
Product	N/A
Version	N/A

Severity	INFO
CVE	N/A
CVSS Score	N/A

Description: Port discovered by Nmap
